| 1 Application Scenario ..... | 1 |
| 2 Configuration Step .....   | 1 |
| 3 Testing Result .....       | 5 |
| 4 Precautions .....          | 6 |

## 1 Application Scenario

Allowed internal user to visit to specific video, but rejected to visit other web site video.

Requirement condition:

1. Prepare one IAM version 12.0.18 device, with IP address 10.1.3.40.
2. Prepare one PC, with a testing IP address 10.1.3.101.
3. The video browsing address <https://sangfor.com/source/video-videos.html>

## 2 Configuration Step

First Step: Update database to latest version.

[System] – [General] – [Update] – [Database Update] , verify if the current database version is the latest version, please make sure that [Application Signature Database] has updated to latest version, else click on [Update now] to update to latest version.

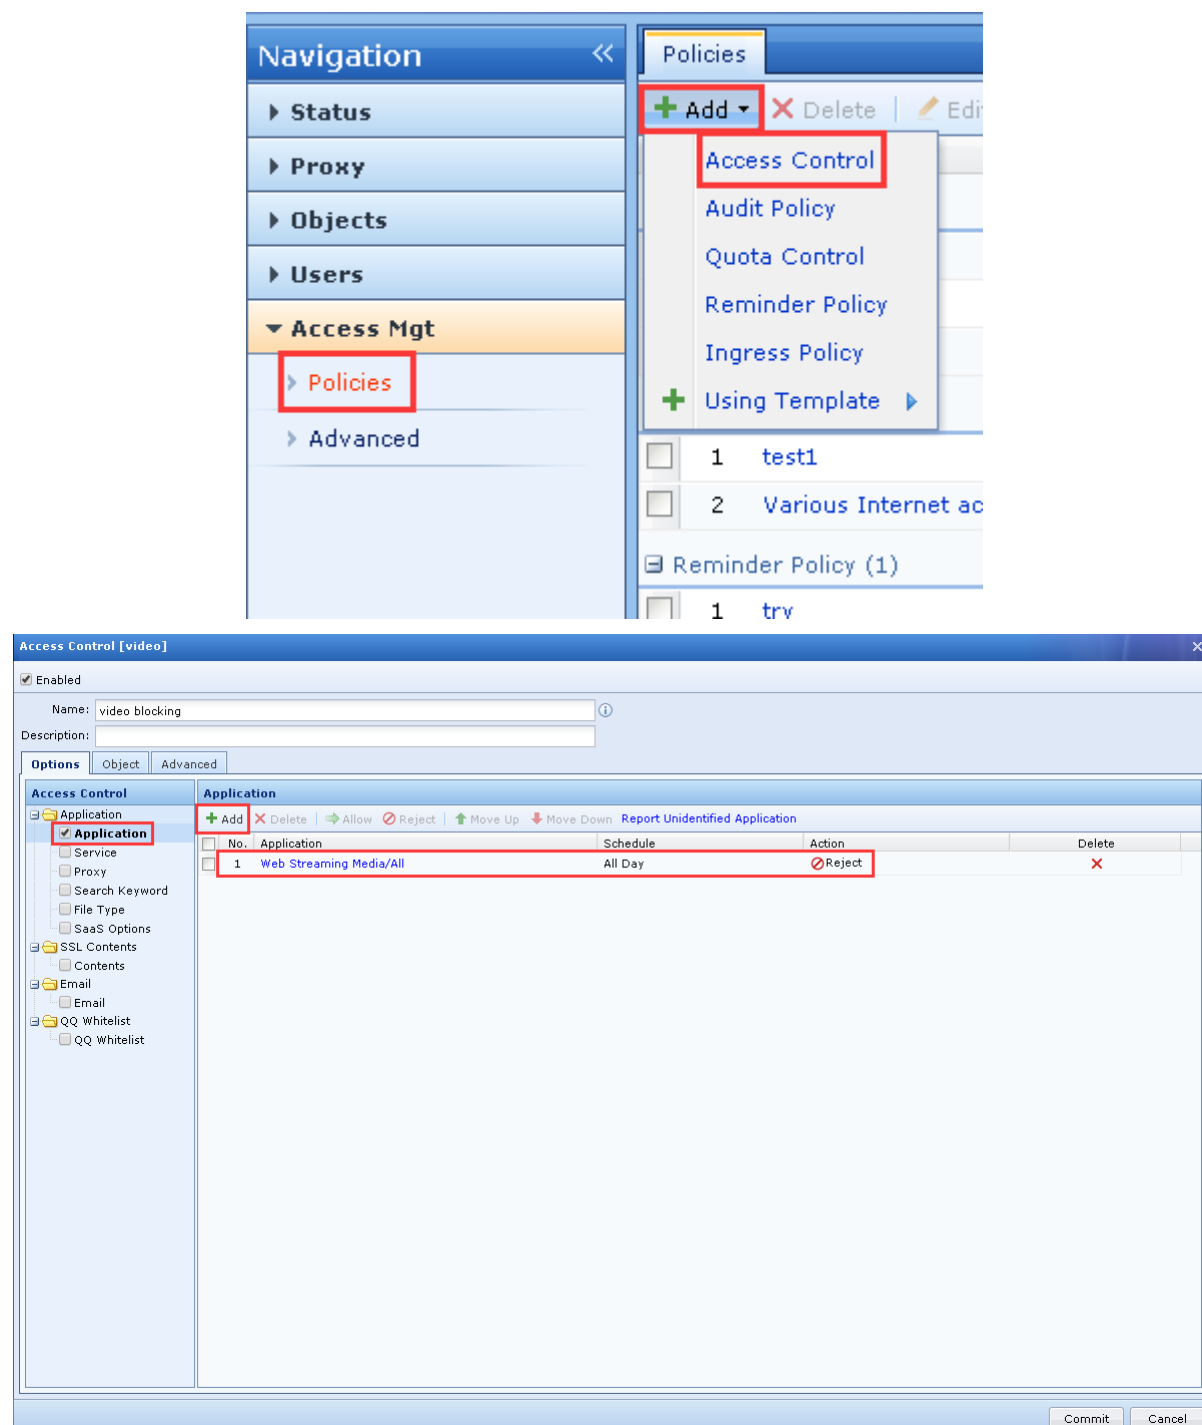

Ensure that [URL Database], [Application Signature Database] and [Audit Rule Database] will have 1 or 2 updates per month.

| No. | Database                       | Current Version                | Latest Version | Update Service Expires On | Auto Update | Operation |
|-----|--------------------------------|--------------------------------|----------------|---------------------------|-------------|-----------|
| 1   | Engine Zero                    | 2019-04-30                     | 2019-04-30     | 30190101                  | ✓           |           |
| 2   | URL Database                   | 2019-11-05 09:00:00            | 2019-11-19     | 2020-01-27                | ✓           |           |
| 3   | System patch                   | SP_LFD SP_fsu SP_ume SP_htc... | SP_userlogout  | Never expire              | ✓           |           |
| 4   | Application Signature Database | 2019-11-05 12:34:56            | 2019-11-05     | 2020-01-27                | ✓           |           |
| 5   | Audit Rule Database            | 2019-11-08                     | 2019-11-08     | 2020-01-27                | ✓           |           |

When update the database, please ensure that the license is within the validity period, as well as the device is able to visit website and resolve the domain name normally.

Second Step: Configure access control policy

In [Access Management] – [Policies], click on [Add] – [Access Control] , insert a name for this policy at “Name” bar, then select [Application] , continue click on [Add], select the application [Web Streaming Video/All], [Schedule] as All Day, [Action] as Reject, [Object] you may choose all or some specified user, you will finish the configuration after click on [Commit], the configuration as diagram below.

Third Step: Testing for blocking and targeted release.

By using a PC to watch the video in Sangfor.com, if the video browsing is rejected, checked on the related log in Report Center, determine the causes of video rejected and perform targeted release.

1. Checked the activity log that recorded in Internal Record Center, as we can see the user has enter Sangfor.com to get view on the video. The diagram as below.

| No. | Username | Group    | Endpoint Device | App Category        | Application                       | Action   | Time                | Details |

While select a [Application], you may use the search bar to look for the application, for example, with insert the keyword “Youtube”, you able to see the related application [Youtube encryption browsing] and [Encrypted Youtube Video], click on the application [Youtube encryption Browsing] you able to see the [Application Details] at bottom right corner, the details include the application name, application category, tag, description and the official website.

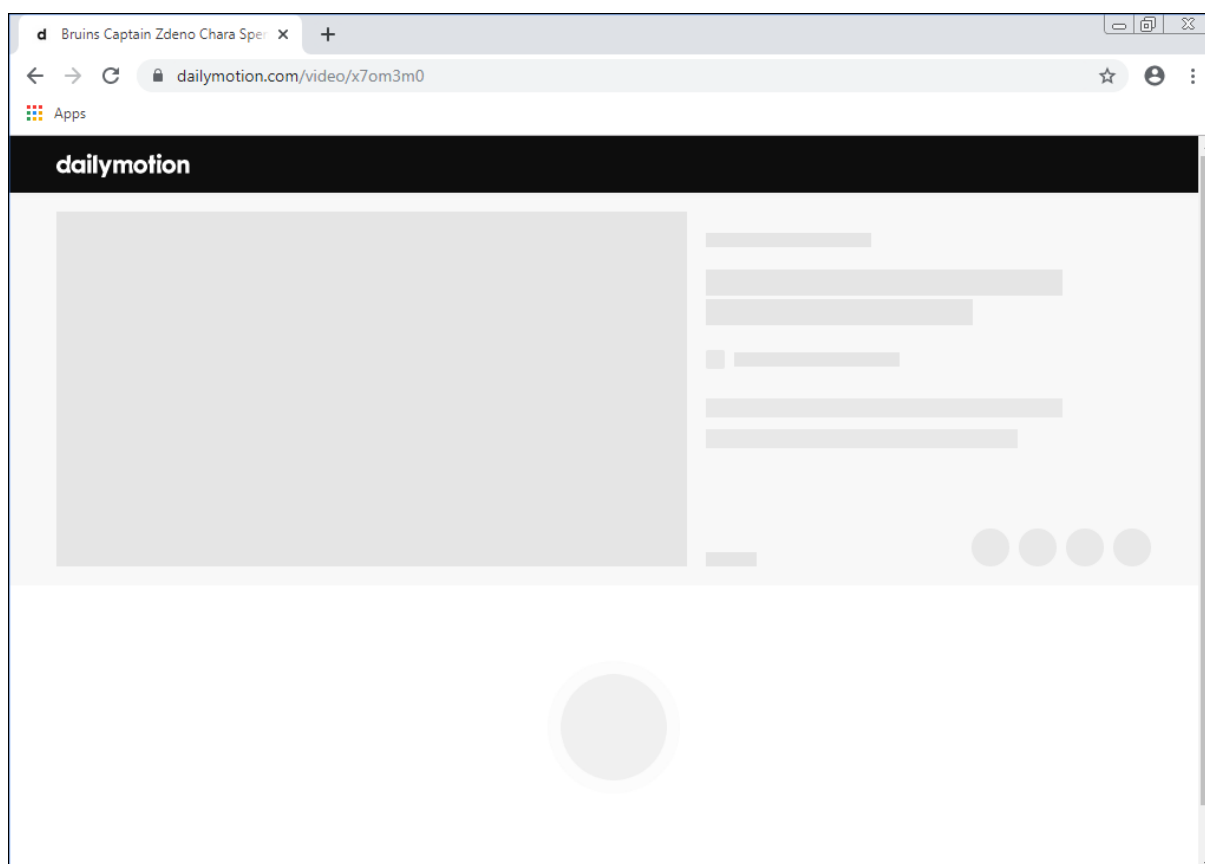

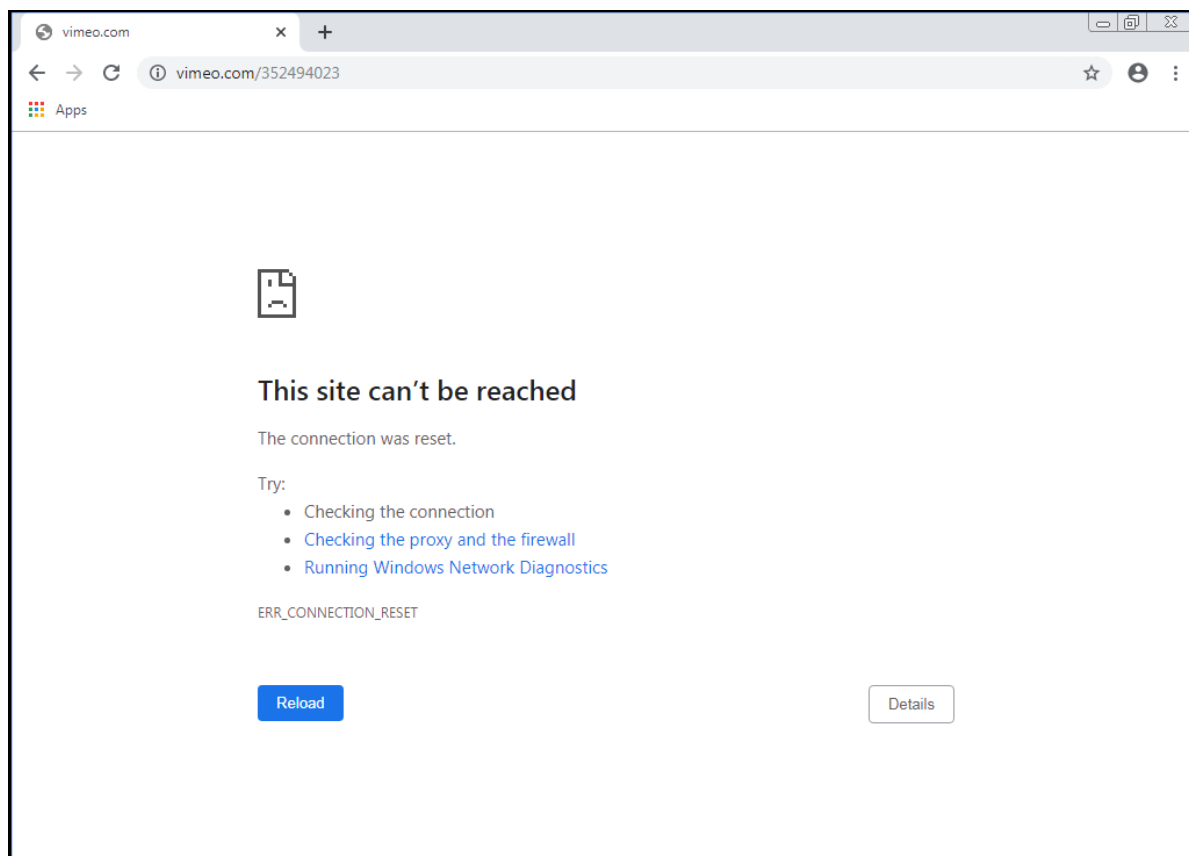

### 3 Testing Result

PC is able to get watch on the video at Sangfor.com, but other web video is not allowed to access or play, as the diagram below.

## 4 Precautions

### 1. If the database cannot be updated, please check on:

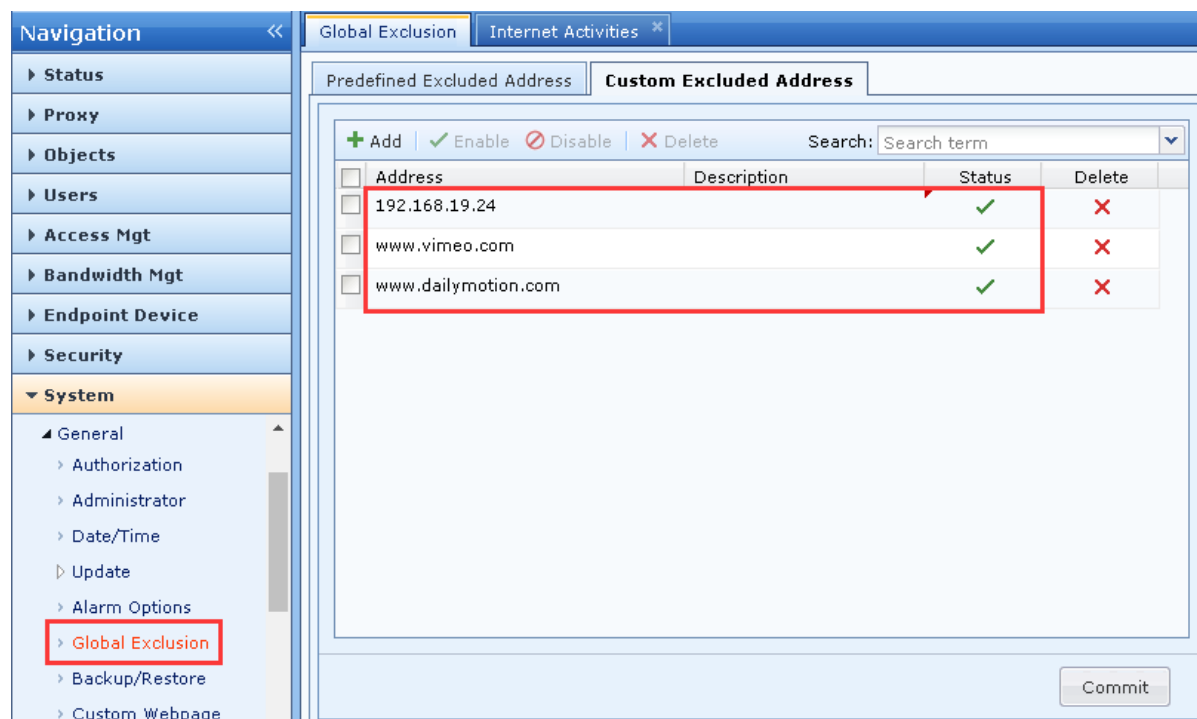

Please ensure that the license is within the validity period .

Please ensure that the device is able to visit website and resolve the domain name normally, since database update is connected to the update server with port 80 to perform updating.

By using the web console at **[System] – [Diagnostics] – [Web Console]**, telnet the domain name with port number, for example : telnet www.baidu.com 80. If the result return “connect OK”, means that the device is able to access to internet and resolve domain name correctly. If the connection fails, please check on the devices DNS configuration and whether the configuration of the upper proxy devices is acting as a proxy for IAM device to access the Internet.

Please ensure that the communicate between IAM and update server is successful. You able to test the update server connectivity at **[System] – [General] – [Update] – [Database Update] – [Update server]**. You can test with different server to ensure that the communication is normal, if the connection is normal, try to use different server to update the database.

2. The Policies only will take effect on the user after user authenticate by IAM. If user able to access internet without going through the device, or the user IP address, Vimeo and Dailymotion domain name has added in Global Exclusion, it will not take effect by the Policies.

3. The policies matching rules is from top to bottom, once it match a policy, it will not continue to match the following policies.

For example, the diagram below shows the user has applied with two policies. The first policy is video allowed, and second policy is video blocking. As we can see the first policy on top of the second policy, video browsing is allowed. What we need to block the video browsing is to push the second policy to the top, then it will block video browsing follow by allow to watch video.
