Sangfor Digitally Transforms the Healthcare Industry

Imagine surviving a major illness, only to find your hospital or healthcare provider has lost all your most personal financial and health information in a cyber attack. COVID-19 has shined a spotlight on the healthcare industry in recent months, uncovering many disturbing and long-forgotten vulnerabilities. When relying on healthcare professionals for the survival of those you love, the last thing you need to worry about is the security of your data. Technology has become an indispensable part of modern healthcare service, with healthcare professionals relying heavily on applications, information systems, mobile devices, electronic medical records (EMR), picture archiving and communication systems (PACS) to provide the best and fastest service. The more traditional 3-tier infrastructure commonly used in the healthcare industry is often slow, rigid and complex, making it impossible to use medical applications and systems to their full potential.

In this session we will explore the many ways a Sangfor HCI solution can enable a faster, more robust, and future-proof digital healthcare platform. .

Speaker: Aaron Wang

Aaron Wang is the Senior Product Manager of Sangfor VDI. Before joining Sangfor, he worked for UBTech Robotics as Sr. Solution Sales Manager and Huawei Middle East where he served as Server Business Director and Sr. IT Solution Manager.

JOIN US FOR THIS WEBINAR & GET A CHANCE TO WIN A \$20 SHOPPING VOUCHER!
